

Reviewer's report

Title: Progression and Regression of Incident Cervical HPV 6, 11, 16 and 18 Infections In Young Women

Version: 2 **Date:** 18 June 2007

Reviewer: Mark H Einstein

Reviewer's report:

General

The authors reply to review adds more clarity to my prior questions and there are no major revisions necessary. This article will add to the rapidly growing HPV vaccine-associated data.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept without revision

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
